Fasset Technologies - Keeping Business Connected

Fasset Technologies Delivering ICT Services to Business

Taking a flexible approach to maintaining the security and reliability of your business through connectivity, communication and back-up services

WHAT IS INFORMATION COMMUNICATION TECHNOLOGY (ICT)?

ICT refers to all the technology used to handle telecommunications, broadcast media, intelligent building management systems, audiovisual processing and transmission systems, and network-based control and monitoring functions.

Efficient, streamlined and robust ICT can help stimulate business productivity through improved connectivity, back-up and a reduction in downtime.

WORKING WITH FASSET TECHNOLOGIES TO KEEP YOUR BUSINESS CONNECTED

Fasset offers a robust ICT service to business:

- Commercial approach to service delivery
- Clear and simple pricing structure
- Flexible services tailored to business requirements

Fasset Technologies Delivering ICT Services to Business

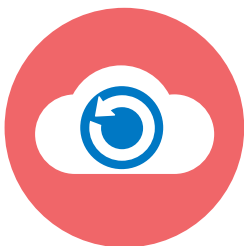

DATA

Take advantage of our connectivity options and provide your business with a diverse leased line connection for the price of a standard ADSL connection. With improved performance and failover services, your business will be online more than ever.

TELEPHONY

Our VoIP telephony services make use of cutting edge virtualized PBX solutions, to deliver astounding quality telephone services anywhere with an internet connection. With the ability to add Contact Centre services, Call Recording features and more, it is sure to meet all your companies telephony requirements.

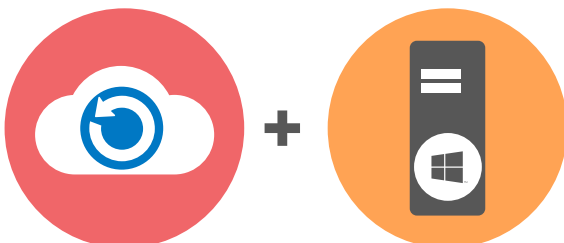

CLOUD BACKUP AND RECOVERY SERVICES

Our Backup and Recovery software (powered by Asigra) provides Enterprise Backup and Recovery in the cloud. Public, Private or a Hybrid cloud, it doesn't matter to us, your data, and more importantly your ability to access your data, is what drives us.

Using Agentless technology, it can take backups of your entire server (and end user) infrastructure, encrypt (using military strength encryption) and transport to our secure datacenter vault.

DATA CENTRE SERVICES

With multiple datacenters throughout the country, why not take up some of our rack space through our Co-Location services. Whether you want to host your live solutions in the cloud, or simply provide a robust failover environment, our datacenters are here to meet your needs. Our datacenter solutions are a clean and easy way to reduce overheads on pricey server rooms and operations centres.

VIRTUAL DISASTER RECOVERY

By combining our Cloud Backup and Recovery services, with our Datacenter services you are able to build a robust failover environment for your business. We can take snapshots of your live servers as frequently as every 15 minutes and have these machines sat waiting in our datacenter.

By only transferring the changes made, this keeps the amount of data needing to be transferred to a minimum whilst ensuring you are always ready to go in the event of an outage.
